

Building a Healthcare Navigation Program with the Bhutanese Refugees of Philadelphia

Statement of Problem

There are approximately 2,000 Bhutanese refugees in Philadelphia, many of whom experience disparities in health that are outside of their control. After arriving in the United States, [refugees](#) must quickly learn to [navigate](#) a host of complex U.S. systems, such as health care, with minimal support.

Description

Building a Healthcare Navigation Program with the Bhutanese Refugees of Philadelphia

Image

Image

There are approximately **2,000 Bhutanese refugees in Philadelphia**. After arriving in the United States, refugees must quickly learn to navigate a host of complex US systems, such as healthcare, with minimal support. The **Health Focal Point** program is community-based and helps clients solve pressing problems **accessing health care**, using a combined approach of **direct assistance** and **education** to help clients gain **knowledge, skills, and confidence**.

The Health Focal Points program is a partnership between the Bhutanese American Organization-Philadelphia and PolicyLab. Using lessons learned from existing [social service organizations](#) serving immigrant and [refugee communities](#), we worked with experts from the [Penn Center for Community Health Workers](#) and the [Center for Public Health Initiatives](#) to adapt a community health worker program aimed at teaching Nepali-speaking Bhutanese refugees how to navigate the U.S. health care system.

This community-based program helps clients solve pressing problems accessing health care, such as language and cultural barriers. It uses a combined approach of direct assistance and education to help clients gain knowledge, skills and confidence. The ultimate goals are self-reliance of the clients, empowerment of the Health Focal Point, and dissemination of an efficient and effective model that new immigrant communities can use to help their members learn to have successful interactions with the U.S. health system.

Next Steps

With funding from the Office of Refugee Resettlement, the Bhutanese American Organization-Philadelphia will continue to expand and improve the Health Focal Points program. We plan to strengthen community outreach efforts as well as include more outreach to engage parents of children under the age of 18. Lastly, we aim to conduct a rigorous outcomes evaluation to document program effectiveness.
