Children's Hospital of Philadelphia
PolicyLab

Nancy Li
MS

Research Statistician

Nancy Li (she/her) is a research statistician at PolicyLab at Children's Hospital of Philadelphia. In this role, she applies a fundamental level of statistical programming to clean and interrogate data, view diagnostics elements of data such as underlying distributions and parameters, implement optimal statistical methods, and interpret and export key visuals and results. She also participates in the communication of research methods, implementation, and results to a varied audience of clinicians, scientists, analysts and programmers.

Nancy is interested in the development and application of statistical methods in public health. She received her master's degree in biostatistics from the University of Miami. Additionally, she used to work as a graduate assistant to analyze population-based studies in cancer risk-related behaviors and possible exposures to job hazards on occupational health.
