Addressing Vaccine Hesitancy to Protect Children & Communities Against Preventable Diseases

View Webinar

This webinar summarizes research findings around the causes and effects of vaccine hesitancy, and proposes policy changes that could lead to increased vaccination rates and greater protection for the health of our children. Joining the PolicyLab Webinar Series is Dr. Kristen Feemster and Dr. Paul Offit.

We have an exciting and timely discussion on this webinar, which coincides with the release of our new PolicyLab *Evidence to Action* brief that you'll be hearing more about from Dr. Feemster. If you have any questions while viewing the webinar, please email us at PolicyLab.Webinars@gmail.com. We'll be summarizing the questions and our responses in a follow-up blog post on the PolicyLab blog.

Authors: Feemster KA, Offit PA
